

***Prefinished real wood veneer***

## **ENVIRONMENT HEALTH & SAFETY**

### **Sustainability**

Innato laminates made from American White Oak (*Innato Boston Crown Oak, Ohio Rift Oak, Powdered Oak*), American Walnut (*Innato Virginia Walnut*), Spotted Gum (*Innato Nymboida Spotted Gum*), Blackbutt (*Innato Nymboida Blackbutt*), Mountain Ash (*Innato Snowy Ash*) and Jarrah (*Innato Bunbury Jarrah*) are made from sustainable natural Veneers from managed forests or wood-lots in the US and Australia. Sustainable harvest means that the amount of timber that grows back each year is greater than, or equal to, the amount harvested. Furthermore, such forests are managed in accordance with strict laws and regulations to protect biodiversity, endangered species, water quality and other environmental values.

### **Sustainable wood veneers have many environmental benefits:**

- Low embodied energy
- Carbon storage – growing trees absorb carbon dioxide which is then “locked up” for the life of the tree and wooden products made from that tree.
- Land use and biodiversity – Sustainably managed native forests are a natural ecosystem and consequently have high biodiversity. Plantations also support a reasonable degree of biodiversity.
- Wood is a renewable resource
- Veneer is one of the most environmentally efficient and economical ways to use beautiful timbers because one cubic metre of veneer can cover more than 1,000 m<sup>2</sup> of panel surface

### **Supporting information on sustainability:**

- USA – [“Assessment of Lawful Harvesting & Sustainability of US Hardwood Exports”](#)
- Australia – [“National Forest Policy Statement”](#)

### **Formaldehyde emissions**

Innato has formaldehyde emission levels of 0.1 mg/L (average) = **E1**

### **Health & Safety**

As in all wood working operations, it is essential that adequate protection is taken against the contact and the breathing of laminate dust when processing, and that normal workplace hygiene and safety practices are followed.
