

Briggs Flameblock® FRMDF Fire Hazard Group 2 Certificates

We wish to inform you that Briggs Veneers is no longer issuing generic Group 2 Fire Certificates for raw and veneered Flameblock® FRMDF. Instead, we will issue a uniquely numbered certificate specific to each project.

To obtain a **numbered Flameblock Group 2 Certificate** please email samples@briggs.com.au with:

Project name:

Project type:

Approximate project timing:

Expected specie(s) of veneer: *Note that all veneers of density up to White Oak (755kg/m3) reach Fire Hazard Group 2 on Flameblock® - see list below. Denser species such as Spotted Gum and Blackbutt only reach Fire Hazard Group 3. In the future we hope to reach Fire Hazard Group 2 with these.*

Please ensure you quote the Certificate Number on your specification/request
all contractors to quote the Certificate Number when ordering Flameblock® for the project.

Veneers of density <755kg/m3 reach Fire Hazard Group 2 on Flameblock® (including but not limited to):

American Cherry	Red Heart Gum	TrueGrain Dove	Western Red Cedar

Oregon	TrueGrain Cheri	Vavona Burl	Woodstock Pewter Oak
Plantation Oak	TrueGrain Chocolate	Victorian Ash	
Poplar Burl	TrueGrain Cinder	Victorian Ash	
Radiata Pine	TrueGrain Claret	Walnut Burl	

Please note that Flameblock® is a registered Trademark of Briggs Veneers and cannot be used or substituted for other brands of FRMDF or any other product. Similarly, the Briggs Veneers Flameblock® Certificate (and Assessment Report) only applies to Briggs Flameblock® FRMDF and does not apply to/cannot be used to show compliance of other brands of FRMDF or other products. We are implementing this system to assist with product tracing and to reduce the risk of product substitution with non-compliant FRMDF - and hence improve the ability to show compliance to the National Construction Code as/when requested by certifiers and others.
