

BRIGGS VENEERS

BRIGGS FLAMEBLOCK FRMDF and BLACK MRMDF

ENVIRONMENT HEALTH & SAFETY

Independent certification for responsible forest management

Briggs FLAMEBLOCK FRMDF and BRIGGS BLACK MRMDF come from Spruce and Fir plantation and natural forest trees harvested in Germany, Netherlands, France, Luxemburg and Belgium and are independently certified to be from well-managed forests under the PEFC™ forest management scheme.

Briggs PEFC™ certified MDF has many environmental benefits:

- Our PEFC™ Chain of Custody certificates ensure supply chain integrity from forest to market
- Low embodied energy
- Carbon storage – growing trees absorb carbon dioxide which is then “locked up” for the life of the tree and wooden products made from that tree.
- Land use and biodiversity – Responsibly managed native forests are a natural ecosystem and consequently have high biodiversity. Plantations also support a reasonable degree of biodiversity.
- Wood is a renewable resource

Briggs PEFC Chain of Custody Certificate No: AU09/3493

Health, Safety, Formaldehyde

FLAMEBLOCK FRMDF and BRIGGS BLACK MRMDF have low formaldehyde emissions (E1/CARB II).

As in all wood working operations, it is essential that adequate protection is taken against the contact and the breathing of MDF dust when processing, and that normal workplace hygiene practices are followed.
